Subject: FW: COT Information

Hi Alan,

Graham has just explained that you are on a tight time frame, this was NOT explained to me last week during our discussion and that being the case I have not had the opportunity to review all the information provided in full detail. As it is the most busiest time of the year for my business I have not had the time between our discussion and now to accurately review ALL the information provided.

I still stand by my statutory declaration that I was able to identify that the incoming faxes provided to me for review had at some stage been received by a secondary fax machine and then retransmitted, this was done by identifying the dual time stamps on the faxes provided.

I have briefly review the new information provided to me and can assess that it looks like the same type of tampering with fax transmittals had taken place on the documents provided. I would not be able to produce another Stat Dec on this until I see the actual original copies of these documents to be 100% sure. The reason why I could provide my first Stat Dec was that I actually sighted the original documents and was there on site during one of the actual transmissions.

Kindest Regards

Peter Hancock
